

Department of Physics Safety and Health Policy

Department of Physics is committed to ensuring a high standard of safety and health (S&H) for its staff, students and visitors, in association with research, teaching and service activities within the department.

We demonstrate our commitment through the implementation of the following policy statements, in alignment with the university's policies and standards.

1) Safety & Health Culture

We strive to build and sustain a positive safety and health culture in the department by integrating safety & health in all aspect of our operations and embracing it as a core value.

2) Accident Prevention

We aim for zero incident/accident by actively identifying and evaluating safety & health risks; and effectively managing them to prevent injuries and ill-health to our staff, students and visitors. We shall achieve this through implementation of our safety & health management system.

3) Legal Compliance

We shall comply with the applicable S&H legislations as well as the corporate S&H policies, directives and standards formulated by the university and the faculty.

4) Training & Education

We shall ensure our staff and students are competent to conduct work activities in a safe manner by equipping them with necessary safety knowledge and technical skills. We shall also ensure that they attend all mandatory safety trainings as required by the university, the faculty and the department.

5) Continual Improvement

We shall review our department's safety & health performance indicators regularly and revise our safety and health management system correspondingly to achieve continual improvement.
